

# CodeIgniter 3 Controllers for Municipal OTMS

This document contains recommended CI3 controller structures for Municipal OTMS modules including Ward, Property, Tax, Payment, Mutation, Reports, and Base Controller architecture.

## Recommended Controllers

application/controllers/

- Dashboard.php
- Ward.php
- Property.php
- Owner.php
- Tax.php
- Payment.php
- Mutation.php
- Reports.php
- Auth.php

---

## Ward Controller

```
class Ward extends CI_Controller {
    public function __construct()
    {
        parent::__construct();
        $this->load->model('Ward_model');
    }
    public function index()
    {
        $data['wards'] =
            $this->Ward_model->get_all();

        $this->load->view(
            'ward/index',
            $data
        );
    }
    public function store()
    {
        $data = [
            'ward_number' => $this->input->post('ward_number'),
            'ward_name' => $this->input->post('ward_name')
        ];

        $this->Ward_model->insert($data);

        redirect('ward');
    }
}
```

---

## Property Controller

```
class Property extends CI_Controller {
    public function __construct()
    {
        parent::__construct();

        $this->load->model('Property_model');
```

```

    }

    public function index()
    {
        $data['properties'] =
            $this->Property_model->get_all();

        $this->load->view(
            'property/index',
            $data
        );
    }

    public function store()
    {
        $data = [
            'property_number' =>
                $this->input->post('property_number'),
            'ward_id' =>
                $this->input->post('ward_id')
        ];

        $this->Property_model->insert($data);

        redirect('property');
    }
}

```

---

## Tax Controller

```

class Tax extends CI_Controller {

    public function __construct()
    {
        parent::__construct();

        $this->load->model('Tax_model');
    }

    public function generate()
    {
        $house_tax =
            $this->input->post('house_tax_amount');

        $water_tax =
            $this->input->post('water_tax_amount');

        $sewer_tax =
            $this->input->post('sewer_tax_amount');

        $total_tax =
            $house_tax +
            $water_tax +
            $sewer_tax;

        $data = [
            'property_id' =>
                $this->input->post('property_id'),
            'total_tax' => $total_tax
        ];

        $this->Tax_model->generate_tax($data);

        redirect('tax');
    }
}

```

---

## Payment Controller

```

class Payment extends CI_Controller {
    public function __construct()

```

```

{
    parent::__construct();

    $this->load->model('Payment_model');
}

public function store()
{
    $data = [
        'assessment_id' =>
            $this->input->post('assessment_id'),
        'paid_amount' =>
            $this->input->post('paid_amount'),
        'payment_status' => 'PAID'
    ];

    $this->Payment_model->make_payment($data);

    redirect('payment');
}
}

```

---

## Mutation Controller

```

class Mutation extends CI_Controller {

    public function __construct()
    {
        parent::__construct();

        $this->load->model('Mutation_model');
    }

    public function store()
    {
        $data = [
            'property_id' =>
                $this->input->post('property_id'),
            'old_owner_id' =>
                $this->input->post('old_owner_id'),
            'new_owner_id' =>
                $this->input->post('new_owner_id'),
            'approval_status' => 'PENDING'
        ];

        $this->Mutation_model
            ->apply_mutation($data);

        redirect('mutation');
    }
}

```

---

## Reports Controller

```

class Reports extends CI_Controller {

    public function __construct()
    {
        parent::__construct();

        $this->load->model('Report_model');
    }

    public function demand_collection()
    {
        $from = $this->input->get('from');
        $to = $this->input->get('to');

        $data['report'] =
            $this->Report_model
                ->demand_collection_report(

```

```

        $from,
        $to
    );

    $this->load->view(
        'reports/demand_collection',
        $data
    );
}
}

```

---

## MY\_Controller (Base Controller)

```

class MY_Controller extends CI_Controller {
    public function __construct()
    {
        parent::__construct();

        if (!$this->session->userdata('user_id')) {
            redirect('auth/login');
        }
    }
}

```

---

## CI3 Request Flow

```

Browser Request
